

IMPACT PROJECTION

AI-Powered Multilingual Welfare Scheme Assistant

Bridging the Gap Between Citizens and Welfare Benefits

The Challenge

India offers hundreds of welfare schemes across healthcare, education, agriculture, housing, employment, pensions, and social security. However, millions of eligible citizens remain unaware of benefits they qualify for.

Key barriers include:

- Information spread across multiple government portals
- Complex eligibility requirements
- Language and literacy constraints
- Lack of personalized guidance
- Difficulty identifying required documents
- Limited access to support services in rural regions

As a result, many citizens either fail to apply for available benefits or submit incorrect applications, reducing the effectiveness of welfare delivery.

Our Solution

The AI-Powered Welfare Scheme Assistant acts as a 24×7 digital welfare facilitator accessible through web, WhatsApp, and SMS platforms.

Core Capabilities

1. Multilingual conversational assistance
2. Personalized welfare scheme recommendations
3. Automated eligibility assessment
4. Document checklist generation
5. Step-by-step application guidance
6. Real-time retrieval of updated scheme information

The platform simplifies welfare discovery and enables citizens to access relevant government services through natural conversations in their preferred language.

Expected Social Impact

Increased Welfare Awareness

Many citizens are aware of only a small fraction of available welfare benefits.

Projected Outcome

- 50–70% increase in scheme awareness among first-time users
 - Better understanding of eligibility criteria
 - Reduced misinformation and confusion
-

Improved Accessibility

The assistant provides welfare guidance through widely used communication channels, reducing dependency on physical support centers.

Projected Outcome

- Greater outreach to rural and underserved populations
 - Improved accessibility through local language support
 - Faster access to welfare-related information
-

Better Benefit Targeting

By analyzing household profiles and eligibility requirements, the system recommends schemes that best match user needs.

Projected Outcome

- Reduction in unsuitable applications
 - Higher success rates for eligible beneficiaries
 - Improved decision-making for citizens
-

Reduced Administrative Burden

A significant portion of government support requests involve repetitive questions related to eligibility, documentation, and application procedures.

Projected Outcome

- Automated handling of routine inquiries
 - Improved efficiency of welfare officers
 - Faster citizen support response times
-

Quantitative Impact Projection

Pilot Deployment

Assumptions

- 5 Districts
- 20,000 Users per District Annually

Annual Reach

Metric	Estimated Impact
Total Users Served	100,000+
Scheme Queries Handled	300,000+
Eligibility Assessments	80,000+
Document Checklists Generated	50,000+
Human Support Requests Avoided	60,000+

State-Level Deployment

Assumptions

- 1 Million Users Annually

Metric	Annual Impact
--------	---------------

Queries Answered	5 Million+
Eligibility Assessments	800,000+
Personalized Recommendations	1 Million+
Citizen Time Saved	200,000+ Hours

National Scale Projection

Assumptions

- 10 Million Users Annually

Metric	Annual Impact
Queries Handled	50 Million+
Eligibility Assessments	8 Million+
Citizens Guided to Benefits	10 Million+
Administrative Workload Reduction	30–40%

Economic Impact

The platform reduces indirect costs associated with welfare access by minimizing:

- Physical visits to government offices
- Repeated document submissions
- Incorrect applications
- Information-seeking delays

Expected Benefits

- Reduced travel expenditure for citizens
 - Improved utilization of welfare resources
 - Faster public service delivery
 - Increased efficiency in welfare administration
-

Inclusivity & Accessibility

The platform currently supports:

Hindi • English • Marathi • Bengali • Tamil

Future versions can support additional regional languages to expand accessibility across India.

Primary Beneficiary Groups

- Farmers
- Women-led households
- Elderly citizens
- Rural workers
- Economically weaker sections

Ensuring equitable access to welfare information regardless of education level, language, or geographical location.

Long-Term Vision

To evolve into a Unified AI-Powered Public Assistance Platform supporting:

- Welfare Scheme Discovery
- Application Assistance
- Benefit Tracking
- Grievance Support
- Government Service Navigation

By combining accessibility, personalization, and scalability, the platform has the potential to become a key digital public infrastructure component that strengthens citizen empowerment and inclusive governance across India.
